

*Bungee Cord, for use with Wind Breaks*

*Bungee Cord  
attaches to eyelets on side windbreaks to hold sides in place.*

Polaris Australia supply the side wind breaks now with two eyelets on each side. These are to allow the use of the hooks and bungee cord we supply as an optional extra. It is up to the retailer to work out the best way to set this up however there should be enough cord in the kit to do one scooter.

On some scooters you may only require half of the kit so you will have leftover for the next one.

Directions for use.

1. Measure between the eyelets that you intend to connect the the bungee cord to.
2. Cut the cord 90mm shorter than this length.
3. Assemble by slipping the ring over the cord then insert the cord into the tube on the back of the hook.
4. With the cord firmly in place in the hook, slip the ring over the hook until it is firmly in place.
